

Protect Your Investment

PACO Coating Mix

Investment?

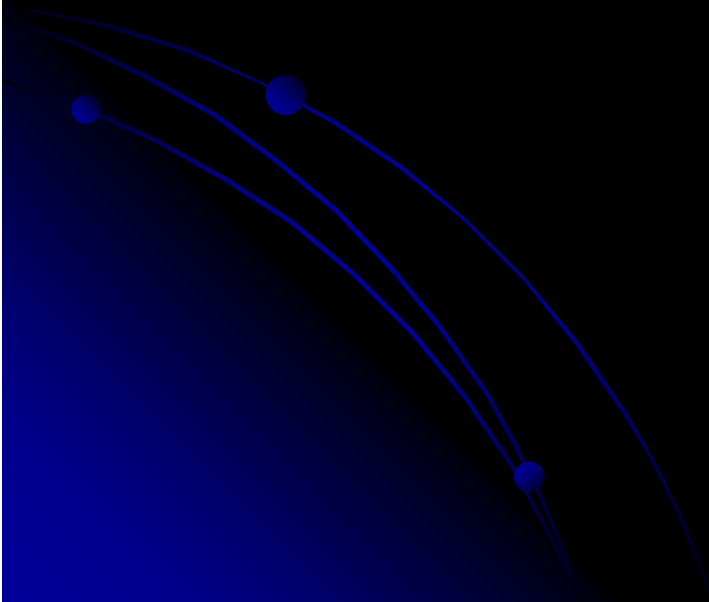

- Kiln Cars are often over looked in brick plants
 - If cars are well maintained, they will last longer
 - Longer Refractory life = \$\$\$\$ Saved!
- 

Kiln Car Damage

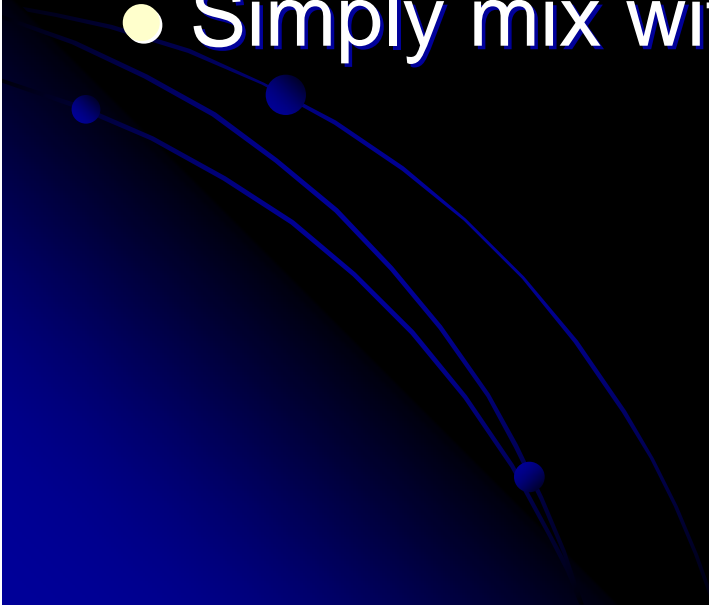

- Mechanical – Physical Damage
 - Abrasion
 - Chipping
- Chemical – Reactions
 - Steel Corrosion (Rust)
 - Alkali Attack
 - Alternate Fuel → Ash
- Thermal
 - Elevated Temperatures
 - Shock → Repeated Cycling (Hot – Cold – Hot)
- Combination

We Clean Our Cars

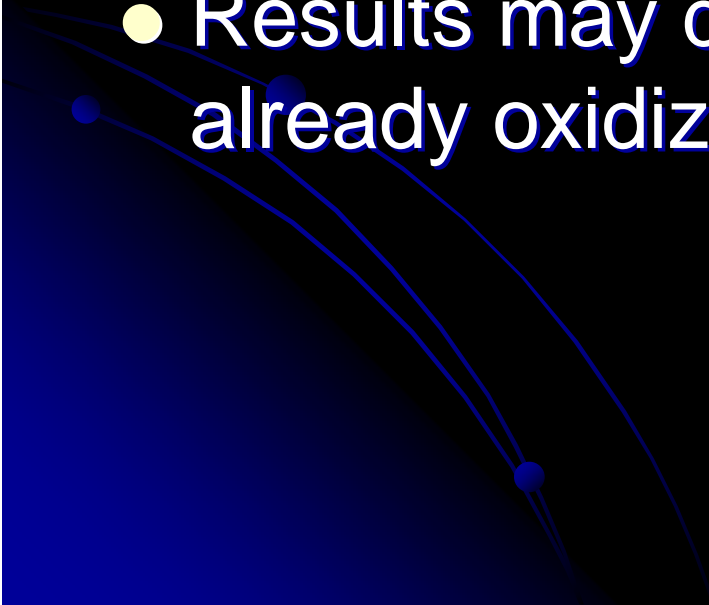

- Excellent! Cleaning your cars is the first and most important step to maintaining an efficient Kiln Car Fleet.
- What else can we do??

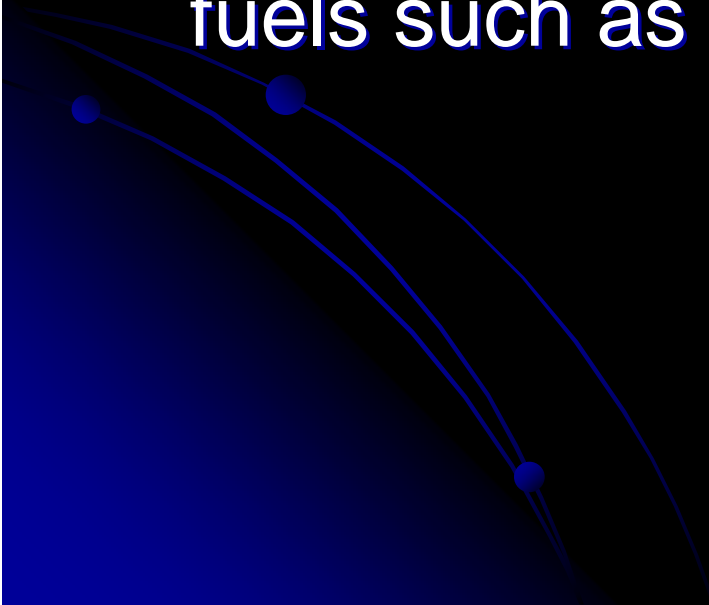

PACO Coating Mix

- Cost effective method to resist corrosion and wear to your kiln car refractory and steel at elevated temperatures
 - Supplied Dry
 - Simply mix with water and apply!
- 

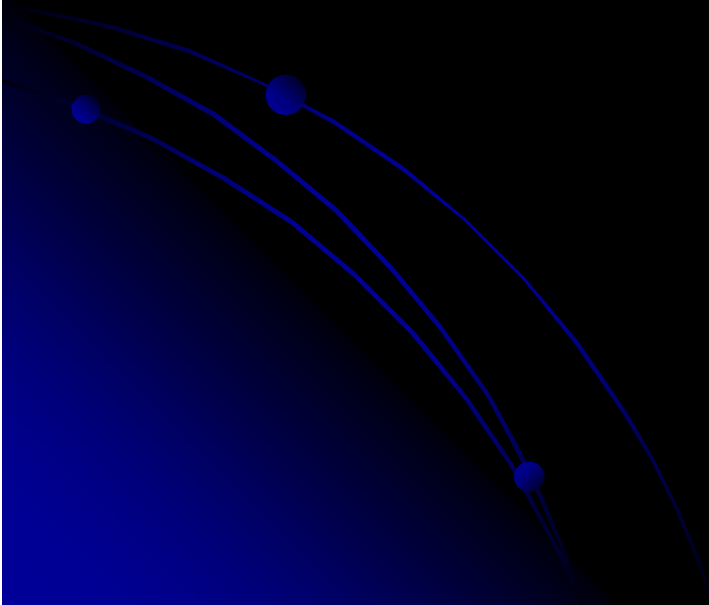

On Steel

- Applied to new steel frames, PACO Coating Mix can help resist corrosion
 - If applied to new steel, you can re-coat down the road
 - Results may diminish on steel that has already oxidized
- 

On Refractory

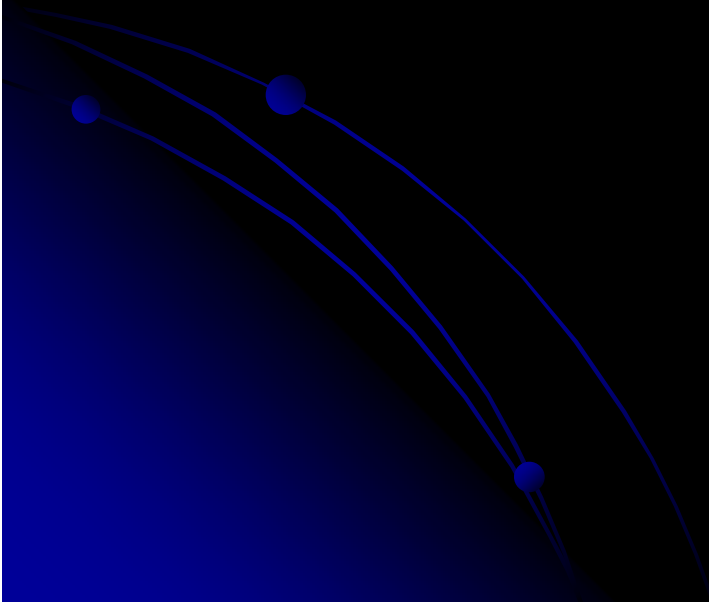

- Helps prevent bottom layer of brick hack from “sticking” to Kiln Car Blocks
 - Reduces abrasive wear
 - Helps lessen harsh effects of alternate fuels such as coal or pet coke
- 

Application Methods

- Trowel – Thick ($1/8''$ – $1/16''$)
 - Brush – Medium ($1/16''$ – $1/32''$)
 - Paint Roller – Thin (Up to $1/32''$)
 - Spray – Depends on Type of Sprayer
- 

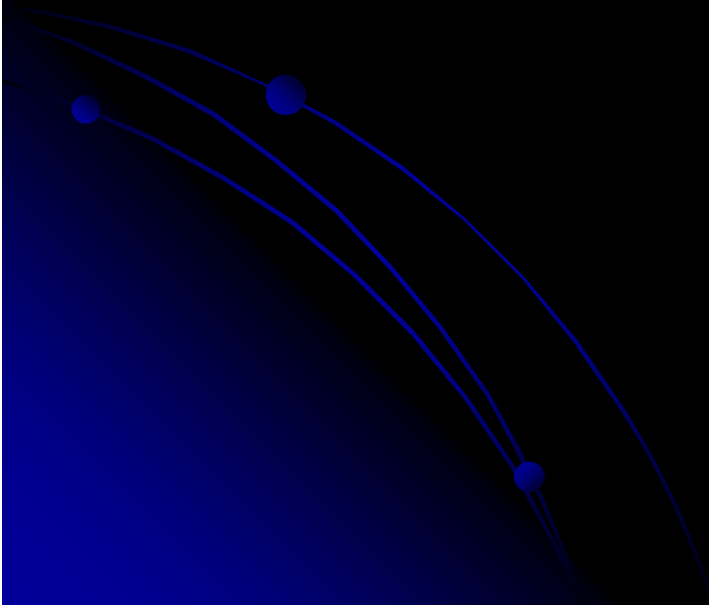

Water Contents (Gallons Per 45Lb Bag)

- TROWEL ● 2 13/16
- BRUSH ● 3 1/8
- PAINT ROLLER ● 4 3/16
- SPRAYER ● 11 1/4

Which Method Should I Use?

- Totally up to you
- Try a couple, choose what works best for you

Re-Apply

- PACO Coating Mix, like anything, will not last forever
- As day to day wear and tear take their toll, the protective layer of PACO Coating Mix will erode
- Simply clean off excess debris and Re-Apply

A Little Goes a Long Way

- Different application methods will yield different coverage areas
 - Adjust the water content to whatever method you prefer
 - You cannot go wrong
-
